

pH
TEK

Proportional Feed System

The pH-TEK adjusts the pH level in the pool automatically resulting in a safer pool environment.

Maintaining a proper pH level allows the chlorine to effectively kill bacteria. This protects the pool surface and equipment resulting in less repairs and extended service life. pH-TEK is a must have for pools using salt systems.

Every salt pool has the underlying issue of high pH and the best way to handle it properly is to automatically dose the acid using a proportional feed system.

**pH
TEK**

pH-TEK Advantages

- Installs in 30 minutes or less
- Can be used in any inground or aboveground pool up to 60,000 gallons
- Turnkey package- contains controller, chemical tank, probe, fittings, tubing, buffer solution
- Automatically tests and balances pH
- Uses a proportional feed algorithm that continuously tests the water
- Indicator lights show alarm status
- Built-in overfeed protection
- One point single calibration
- Automatic restart in the event of a power failure
- Rugged weather and corrosion resistant enclosure
- Reduces pool and equipment maintenance
- Reduces acid use up to 40%
- Eliminates unhealthy highs and lows
- Critical fault protections with automatic shut-down

Saddle clamps for easy installation
